

6. A passkey will appear on the next screen.
7. Follow the instructions for your particular phone to pair it to the vehicle using the Bluetooth's screen passkey.

8. When the connection is completed the following screen is displayed, the pairing is completed and Bluetooth® is ready to make calls.
9. If a screen is displayed saying that the connection failed, follow the screen prompts to try again.

BLUETOOTH® CONNECTIVITY

A common concern to customers is difficulty pairing the phone to the vehicle. If the customer has a manual for the cell phone, you can assist them by referencing the manual. **It may be helpful to turn the cell phone off, then on again prior to another attempt to pair the phone to the vehicle.**

Pairing instructions for each approved Bluetooth cell phone can be found at www.toyota.letstalk.com

“Device cannot be found” is another common concern. Be sure to turn the Bluetooth® function on for the phone you are adding, and check to see if the vehicle system is in “Add Phone” mode. When attempting to register a phone to the vehicle, always place the vehicle system in “Add Phone” mode first, then try to make the connection from the phone.

“Connection failure” may appear on the screen if the incorrect passkey is entered into the phone. Verify that the correct passkey number has been input into the phone.

Notes:

Because of the differences in the quality of cell phones and Bluetooth® chip programming, it is unclear that all Bluetooth® capable cell phones will have the same level of performance when interfacing with the Bluetooth chip in Toyota vehicles. A current list of compatible phones is posted on <http://toyota.letstalk.com>.
