Information current at time of printing.

1 Charge time varies based on vehicle level of charge, charging rate, ambient temperature, and many other factors. 2 Manufacturer-estimated range on a full battery charge. Actual range will vary with driving conditions, weather, and your vehicle's condition. 3 EyeSight Driver Assist Technologies may not operate optimally under all driving conditions. The driver is always responsible for safe and attentive driving. Pre-Collision System is designed to provide automatic braking that either prevents a collision or reduces the severity of a frontal impact. Acceleration Suppression at Low-Speed is designed to reduce acceleration and minimize the severity of certain frontal impacts. Dynamic Radar Cruise Control is designed to assist the driver and is not a substitute for safe and attentive driving. Lane Tracing Assist operates only when used in conjunction with Dynamic Radar Cruise Control. Lane Departure Alert and Lane Departure Prevention operate only when the lane markings are visible. System effectiveness depends on many factors, such as vehicle maintenance, weather, and road conditions. See your Owner's Manual for complete details on system operation and limitations. 4 Lane Change Assist monitors the area of an indicated lane change and provides steering assist to perform the change if the system determines it is safe to do so. It is not a substitute for safe and attentive driving. 5 Blind-Spot Monitor and Front and Rear Cross-Traffic Alert are systems designed to assist the driver by monitoring the front, rear, and side areas of the vehicle to detect potential hazards that may not be visible from the driver's position and are not a substitute for safe and attentive driving. 6 Traffic Jam Assist is not an automated driving system. Driving safely is solely the responsibility of the driver. Do not overly rely on this system and pay careful attention to the surrounding conditions in order to ensure safe driving. See your Owner's Manual for complete details on system operation and limitations. Traffic Jam Assist requires an active trial or subscription to Drive Connect, 4G network dependent. 7 The distraction mitigation system is a driver recognition technology designed to alert the driver if their attention to the road wavers or if the driver's face appears to turn away. The driver is always responsible for safe and attentive driving. System effectiveness may be affected by articles of clothing worn on the head or face. See your Owner's Manual for complete details on system operations and limitations. 8 Premium paint at additional cost. See your Subaru retailer for details.
